

DEPARTMENT OF THE ARMY
DETROIT DISTRICT
CORPS OF ENGINEERS
477 MICHIGAN AVENUE
DETROIT, MI 48226-2550

October 25, 2017

Required maintenance and inspections of the dike connecting the DePere Lock to the Dam has required the Corps to lower the upstream water level in the pool between the DePere and Little Rapids (also known as Little Kaukauna) dams. The Corps will make every effort to maintain adequate water depth in the navigation channel. There is no immediate danger to the public, but because of the lower pool, boating activities within the pool should be done with caution until the maintenance and inspection activities are complete.

Questions and concerns should be directed to Chadwick Shaw, Chief of Fox River Operations at (920) 380-7106
